

Preface

Volume 5

Bernhard Steffen

Abstract

This volume contains a selection of papers from the First International Workshop on *Verification of Infinite State Systems (Infinity'96)*, which took place at the University of Pisa (Italy), 30–31 August, 1996, as a satellite of CONCUR'96, the 7th International Conference on *Concurrency Theory*.

The aim of the workshop was to provide a forum for researchers interested in the development of mathematical techniques for the analysis of infinite state systems, a topic which has received a concerted effort within the Concurrency Theory community over the past few years. The basis of this effort has been the realization that an understanding of infinite state systems is necessary in order to have a complete picture of general process algebras, Petri nets, or other formalisms incorporating value-passing, real-time, hybrid, and/or probabilistic aspects. Its importance has grown however by the further realization that techniques which are developed for infinite state systems—particularly structural techniques—can potentially provide elegant solutions to the state-space explosion problem in the analysis of finite state systems, as well as to classical problems in language theory. Possible topics for inclusion are: decidability issues for equivalence and model checking over various classes of infinite state systems; complexity results for decidability results; connections and applications to questions in classical automata and formal language theory; and tools and case studies involving nontrivial applications of methods for the analysis of infinite state systems.

In addition to the regular sessions, *Infinity* featured three invited talks, given by Yoram Hirshfeld (Tel Aviv University, Israel), Thomas A. Henzinger (University of California at Berkeley, USA), and Javier Esparza (Technische Universität München, Munich, Germany).

In addition to the Editors, the Program Committee included Julian Bradfield (Edinburgh) and Faron Moller (Stockholm). We also would like to thank the referees who assisted in the selection of the regular contributions among the 24 submissions received.

Finally, warm thanks are due to Tiziana Margaria, who has provided invaluable assistance in the preparation of the text of this volume. Without her you would not hold this volume in your hands, nor could you browse it on your screen.
